4. FIRST AID MEASURES

First aid measures

General advice

If symptoms persist, call a physician. Do not breathe dust/fume/gas/mist/vapors/spray. Do not get in eyes, on skin, or on clothing.

Skin Contact

Consult a physician if necessary. Wash off immediately with soap and plenty of water while removing all contaminated clothes and shoes. Immediate medical attention is not required. If skin irritation persists, call a physician.

Eye contact

Immediately flush with plenty of water. After initial flushing, remove any contact lenses and continue flushing for at least 10 minutes. Keep eye wide open while rinsing upper and lower lids. If symptoms persist, call a physician.

Inhalation	Remove to fresh air and keep at rest in a position comfortable for breathing. Call a physician. If breathing is irregular or stopped, administer artificial respiration. Avoid direct contact with skin. Use barrier to give mouth-to-mouth resuscitation. Immediate medical attention is not required. If symptoms persist, or victim is unconscious, call a physician immediately. Maintain an open airway. Loosen tight clothing such as collar, tie, belt or waistband. Move to fresh air in case of accidental inhalation of vapors or decomposition products.
Ingestion	Get medical attention immediately. Call a poison center or physician. Do NOT induce vomiting. Aspiration hazard. If vomiting occurs, keep head below hips to prevent aspiration into lungs. Rinse mouth with water. Never give anything by mouth to an unconscious person. Call a physician immediately.
Self-protection of the first aider	Use personal protective equipment as required. May be hazardous to give mouth-to-mouth resuscitation.

Most important symptoms and effects, both acute and delayed

Symptoms	Any additional important symptoms and effects are described in Section 11: Toxicology Information.
-----------------	--

Indication of any immediate medical attention and special treatment needed

Note to physicians	If ingested, presents significant aspiration hazard. Induction of emesis is not recommended. Consider activated charcoal and/or gastric lavage. If patient is obtunded, protect the airway by cuffed endotracheal tube or by placement of the body in a Trendelenburg and left lateral decubitus position.
